DT Article

LA English

SL English

AB Antibody responses to \*\*\*Acinetobacter\*\*\* (five strains), Pseudomonas  
aeruginosa, Escherichia coli, myelin basic protein (MBP), and  
neurofilaments were measured in sera from 26 multiple sclerosis (MS)  
patients, 20 patients with cerebrovascular accidents (CVA), 10 patients  
with viral encephalitis, and 25 healthy blood donors. In MS patients,  
elevated levels of antibodies against all strains of \*\*\*Acinetobacter\*\*\*  
tested were present, as well as antibodies against P. aeruginosa, MBP, and  
neurofilaments, but not antibodies to E. coli, compared to the CVA group  
and controls. The myelin- \*\*\*Acinetobacter\*\*\* -neurofilament antibody  
index appears to distinguish MS patients from patients with CVAs or  
healthy controls. The relevance of such antibodies to the neuropathology  
of MS requires further evaluation.

AB A method for detecting a de-myelinating disease or \*\*\*spongiform\*\*\* encephalopathy in mammals comprises testing a biol. sample obtained from the mammal for IgA antibodies indicative of infection by an \*\*\*Acinetobacter\*\*\* species. The \*\*\*Acinetobacter\*\*\* species is one which presents to the mammal an antigen which exhibits mol. mimicry with the myelin of the mammal e.g. \*\*\*Acinetobacter\*\*\* calcoaceticus. The antibodies tested for are antibodies which bind to an epitope present in or derived from the \*\*\*Acinetobacter\*\*\* species or to a prepd. peptide sequence corresponding thereto or to a conformationally similar peptide sequence e.g. the peptide sequence RFSAWGAE or ISRFAWGGEV. The method tests for bovine \*\*\*spongiform\*\*\* encephalopathy, multiple sclerosis and Creutzfeldt-Jacob disease in humans. A test kit uses as the test antigen the whole \*\*\*Acinetobacter\*\*\* organism or at least one prepd. peptide sequence as described above and a secondary antibody against the human, bovine, or other mammalian IgA.

AB Bovine \*\*\*spongiform\*\*\* encephalopathy (BSE) is a neurological disorder, predominantly of British cattle, which belongs to the group of transmissible \*\*\*spongiform\*\*\* encephalopathies together with Creutzfeldt-Jakob disease (CJD), kuru, and scrapie. Autoantibodies to brain neurofilaments have been previously described in patients with CJD and kuru and in sheep affected by scrapie. \*\*\*Spongiform\*\*\* -like changes have also been observed in chronic experimental allergic encephalomyelitis, at least in rabbits and guinea pigs, and in these conditions autoantibodies to myelin occur. We report here that animals with BSE have elevated levels of immunoglobulin A autoantibodies to brain components, i.e., neurofilaments ( $P < 0.001$ ) and myelin ( $P < 0.001$ ), as well as to \*\*\*Acinetobacter\*\*\* calcoaceticus ( $P < 0.001$ ), saprophytic microbes found in soil which have sequences cross-reacting with bovine neurofilaments and myelin, but there were no antibody elevations against Agrobacterium tumefaciens or Escherichia coli. The relevance of such mucosal autoantibodies or antibacterial antibodies to the pathology of BSE and its possible link to \*\*\*prions\*\*\* requires further evaluation.

AB A diagnostic test is provided for \*\*\*spongiform\*\*\* encephalopathy and other demyelinating conditions in mammals which comprises assaying antibodies present in the mammal which bind to an antigenic peptide which exhibits mol. mimicry of a mammalian myelin peptide, e.g. one having the sequence FSWGAEQK. This test is useful for detecting bovine \*\*\*spongiform\*\*\* encephalopathy (BSE) in cattle by assaying sera collected from the cattle for antibodies to a species of \*\*\*Acinetobacter\*\*\*, Agrobacterium or Ruminococcus, or a peptide having a sequence present in said species which mimics a peptide of bovine myelin and identifying animals having a level of antibodies at least about two std. deviations above that of healthy control animals.

DT Article

LA English

AB Bovine \*\*\*spongiform\*\*\* encephalopathy (BSE) is a neurological disorder which has affected cattle in the UK. It has been suggested that it is caused by \*\*\*prions\*\*\* and these may also be responsible for scrapie in sheep and Creutzfeldt-Jakob disease (CJD) in humans. The molecular mimicry theory is an alternative model which suggests that BSE could be an autoimmune disease caused by exposure of cattle to bacteria showing cross-reactivity with nervous tissue. \*\*\*Acinetobacter\*\*\*

calcoaceticus, Ruminococcus albus, Agrobacterium tumefaciens and Escherichia coli have been shown to contain molecular sequences which resemble brain tissue. Neurological damage is caused either by \*\*\*prions\*\*\* or by autoimmune mechanisms and the contrasting features of these two theories are reviewed Furthermore, the autoimmune theory implies that there is no need for a cull of cattle, and that humans will not develop CJD provided they are not exposed to these bacteria.

ISSN: 0091-6765.

DT Article

LA English

AB Bovine \*\*\*spongiform\*\*\* encephalopathy (BSE) could be an autoimmune disease produced following exposure of cattle to feedstuffs containing bacteria showing molecular mimicry between bacterial components and bovine tissue. Analysis of molecular sequence databases (Genbank and SwissProt) shows that three bacteria ( \*\*\*Acinetobacter\*\*\* calcoaceticus, Ruminococcus albus, and Agrobacter tumefaciens) share sequences with the encephalitogenic peptide of bovine myelin, while three molecules in Escherichia coli show molecular mimicry with host-encoded \*\*\*prion\*\*\* protein. Immune responses against these bacteria at both T and B cell levels may cause neurological tissue injury resembling BSE. The role of these bacteria in BSE, if any, merits further investigation.

AB The present invention relates to novel colorectal cancer related polynucleotides and the polypeptides encoded by these polynucleotides herein collectively known as "colorectal cancer antigens," and the use of such colorectal cancer antigens for detecting disorders of the colon and/or rectum, particularly the presence of colorectal cancer and colorectal cancer metastases. More specifically, isolated colorectal cancer associated nucleic acid molecules are provided encoding novel colorectal cancer associated polypeptides. Novel colorectal cancer polypeptides and antibodies that bind to these polypeptides are provided. Also provided are vectors, host cells, and recombinant and synthetic methods for producing human colorectal cancer associated polynucleotides and/or polypeptides. The invention further relates to diagnostic and therapeutic methods useful for diagnosing, treating, preventing and/or prognosing disorders related to the colon and/or rectum, including colorectal cancer, and therapeutic methods for treating such disorders. The invention further relates to screening methods for identifying agonists and antagonists of polynucleotides and polypeptides of the invention. The present invention further relates to methods and/or compositions for inhibiting the production and function of the polypeptides of the present invention.

AB The present invention relates to novel proteins. More specifically, isolated nucleic acid molecules are provided encoding novel polypeptides. Novel polypeptides and antibodies that bind to these polypeptides are provided. Also provided are vectors, host cells, and recombinant and synthetic methods for producing human polynucleotides and/or polypeptides, and antibodies. The invention further relates to diagnostic and therapeutic methods useful for diagnosing, treating, preventing and/or prognosing disorders related to these novel polypeptides. The invention further relates to screening methods for identifying agonists and antagonists of polynucleotides and polypeptides of the invention. The present invention further relates to methods and/or compositions for inhibiting or enhancing the production and function of the polypeptides of the present invention.

AB The present invention relates to novel lung related polynucleotides and the polypeptides encoded by these polynucleotides herein collectively known as "lung antigens," and the use of such lung antigens for detecting disorders of the lung, particularly the presence of lung cancer and lung cancer metastases. More specifically, isolated lung associated nucleic acid molecules are provided encoding novel lung associated polypeptides. Novel lung polypeptides and antibodies that bind to these polypeptides are provided. Also provided are vectors, host cells, and recombinant and synthetic methods for producing human lung associated polynucleotides and/or polypeptides. The invention further relates to diagnostic and therapeutic methods useful for diagnosing, treating, preventing and/or prognosing disorders related to the lung, including lung cancer, and therapeutic methods for treating such disorders. The invention further relates to screening methods for identifying agonists and antagonists of polynucleotides and polypeptides of the invention. The present invention further relates to methods and/or compositions for inhibiting the production and function of the polypeptides of the present invention.

AB The present invention relates to novel proteins. More specifically, isolated nucleic acid molecules are provided encoding novel polypeptides. Novel polypeptides and antibodies that bind to these polypeptides are provided. Also provided are vectors, host cells, and recombinant and synthetic methods for producing human polynucleotides and/or polypeptides, and antibodies. The invention further relates to diagnostic and therapeutic methods useful for diagnosing, treating, preventing and/or prognosing disorders related to these novel polypeptides. The invention further relates to screening methods for identifying agonists and antagonists of polynucleotides and polypeptides of the invention. The present invention further relates to methods and/or compositions for inhibiting or enhancing the production and function of the polypeptides of the present invention.

AB The present invention relates to novel pancreatic related polynucleotides, the polypeptides encoded by these polynucleotides herein collectively referred to as "pancreatic antigens," and antibodies that immunospecifically bind these polypeptides, and the use of such pancreatic polynucleotides, antigens, and antibodies for detecting, treating, preventing and/or prognosing disorders of the pancreas, including, but not limited to, the presence of pancreatic cancer and pancreatic cancer metastases. More specifically, isolated pancreatic nucleic acid molecules are provided encoding novel pancreatic polypeptides. Novel pancreatic polypeptides and antibodies that bind to

these polypeptides are provided. Also provided are vectors, host cells, and recombinant and synthetic methods for producing human pancreatic polynucleotides, polypeptides, and/or antibodies. The invention further relates to diagnostic and therapeutic methods useful for diagnosing, treating, preventing and/or prognosing disorders related to the pancreas, including pancreatic cancer, and therapeutic methods for treating such disorders. The invention further relates to screening methods for identifying agonists and antagonists of polynucleotides and polypeptides of the invention. The invention further relates to methods and/or compositions for inhibiting or promoting the production and/or function of the polypeptides of the invention.

AB The present invention relates to novel proteins. More specifically, isolated nucleic acid molecules are provided encoding novel polypeptides. Novel polypeptides and antibodies that bind to these polypeptides are provided. Also provided are vectors, host cells, and recombinant and synthetic methods for producing human polynucleotides and/or polypeptides, and antibodies. The invention further relates to diagnostic and therapeutic methods useful for diagnosing, treating, preventing and/or prognosing disorders related to these novel polypeptides. The invention further relates to screening methods for identifying agonists and antagonists of polynucleotides and polypeptides of the invention. The present invention further relates to methods and/or compositions for inhibiting or enhancing the production and function of the polypeptides of the present invention.

AB The present invention relates to a novel human protein called Human G-protein Chemokine Receptor (CCR5) HDGNR10, and isolated polynucleotides encoding this protein. The invention is also directed to human antibodies that bind Human G-protein Chemokine Receptor (CCR5) HDGNR10 and to polynucleotides encoding those antibodies. Also provided are vectors, host cells, antibodies, and recombinant methods for producing Human G-protein Chemokine Receptor (CCR5) HDGNR10 and human anti-Human G-protein Chemokine Receptor (CCR5) HDGNR10 antibodies. The invention further relates to diagnostic and therapeutic methods useful for diagnosing and treating diseases, disorders, and/or conditions related to this novel human protein and these novel human antibodies.

AB The present invention relates to novel ovarian related polynucleotides and the polypeptides encoded by these polynucleotides herein collectively known as "ovarian antigens," and the use of such ovarian antigens for detecting disorders of the ovaries and/or breast, particularly the presence of ovarian and/or breast cancer and ovarian and/or breast cancer metastases. More specifically, isolated ovarian associated nucleic acid molecules are provided encoding novel ovarian associated polypeptides. Novel ovarian polypeptides and antibodies that bind to these polypeptides are provided. Also provided are vectors, host cells, and recombinant and synthetic methods for producing human ovarian associated polynucleotides and/or polypeptides. The invention further relates to diagnostic and therapeutic methods useful for diagnosing, treating, preventing and/or prognosing disorders related to the ovaries and/or breast, including ovarian and/or breast cancer, and therapeutic methods for treating such disorders. The invention further relates to screening methods for identifying agonists and antagonists of polynucleotides and polypeptides of the invention. The present invention further relates to methods and/or compositions for inhibiting the production and function of the polypeptides of the present invention.

AB A method for detecting a de-myelinating disease or \*\*\*spongiform\*\*\* encephalopathy in mammals comprises testing a biol. sample obtained from the mammal for \*\*\*IgA\*\*\* antibodies indicative of infection by an \*\*\*Acinetobacter\*\*\* species. The \*\*\*Acinetobacter\*\*\* species is one which presents to the mammal an antigen which exhibits mol. mimicry with the myelin of the mammal e.g. \*\*\*Acinetobacter\*\*\* calcoaceticus. The antibodies tested for are antibodies which bind to an epitope present in or derived from the \*\*\*Acinetobacter\*\*\* species or to a prepd. peptide sequence corresponding thereto or to a conformationally similar peptide sequence e.g. the peptide sequence RFSAWGAE or ISRFWGEV. The method tests for bovine \*\*\*spongiform\*\*\* encephalopathy, multiple sclerosis and Creutzfeldt-Jacob disease in humans. A test kit uses as the test antigen the whole \*\*\*Acinetobacter\*\*\* organism or at least one prepd. peptide sequence as described above and a secondary antibody against the human, bovine, or other mammalian \*\*\*IgA\*\*\*.

ISSN: 0019-9567

DT Journal  
LA English

AB Study of serum samples from 29 cows with bovine \*\*\*spongiform\*\*\* encephalopathy (BSE) and from 18 without BSE showed that animals with BSE had elevated levels of \*\*\*IgA\*\*\* autoantibodies to brain components, i.e., neurofilaments ( $P<0.001$ ) and myelin ( $P<0.001$ ), as well as to A. calcoaceticus ( $P<0.001$ ), saprophytic microbes found in soil which have sequences cross-reacting with bovine neurofilaments and myelin, but there were no antibody elevations against Agrobacterium tumefaciens or Escherichia coli. It is concluded that the relevance of such mucosal autoantibodies or antibacterial antibodies to the pathology of BSE and its possible link to prions requires further evaluation.
